ABSTRACT

This study was done to analyze the impact of inflation and economic growth on the unemployment rate in West Kalimantan period 1992-2011. The data were analyzed by using Multiple Linear Regression. The hypotheses were tested using partial T-test, partial F-test, and coefficients of determination test (R²).

This study found that the inflation trend is insignificantly influential to the unemployment rate it was shown by the result of significant level $0,273 > 0,05$. On the other side, the unemployment rate and economic growth show negative significant influent at $0,038 < 0,05$ significant level with $-0,282$ regression. Meanwhile, test of inflation variable and economic growth variable show significant influent to the unemployment rate at $0,000 < 0,05$ significant level. These result indicate that inflation and economic growth are simultaneously influent to the unemployment.

Key words: Inflation, Economic Growth, Unemployment
